Polynucleotide that is designed for the female delicate area. It is injected under local anesthetic, and local anesthetic is applied after 10% Lignocaine numbing cream Plinest is a brand of polynucleotide (PN) injectables used for vulvovaginal rejuvenation, particularly through a specialized formulation called Plinest NewGyn. Derived from purified fish DNA (specifically trout gonad DNA), these "biostimulators" work at a cellular level to repair and regenerate tissue rather than simply adding temporary volume like traditional fillers.	

Menopause Consultation

£165 for 90 min Consultation
